03

# Literature overview functions

- not repeat work done by others
- know existing methods and terms
- develop some existing idea
- find points of growth
- realize how big is a field
- find implementations to be based on
- find datasets for your work
- get inspiration

# Literature overview

You need to analyze
current state of the problem

# Literature overview

Typical steps:

- Wide and shallow (table) (30 - 100 papers)
  - Depth estimation example
  - Image search example
- Narrow and deep (text document) (10 - 25 papers)
  - Depth estimation example
  - Image search example

# Chapters of literature overview

- Problem formulation
- Datasets
- Metrics
- Solutions
- Your approach

Main question to answer:

Why your work is relevant and important?

# Structure of solutions

- from problem formulation
- to big groups of methods
- finally narrow to your approach

# Useful services

- Zotero
  - open source tool for managing papers
- https://scispace.com/
  - specialized LLM to analyze scientific literature
- Obsidian
  - take Markdown notes in multiplatform way

# Requirements and suggestions

- Open source code and text
- Weekly reports on completed tasks
- Final texts written in Latex
  - e.g. Overleaf

# Thanks for attention!
